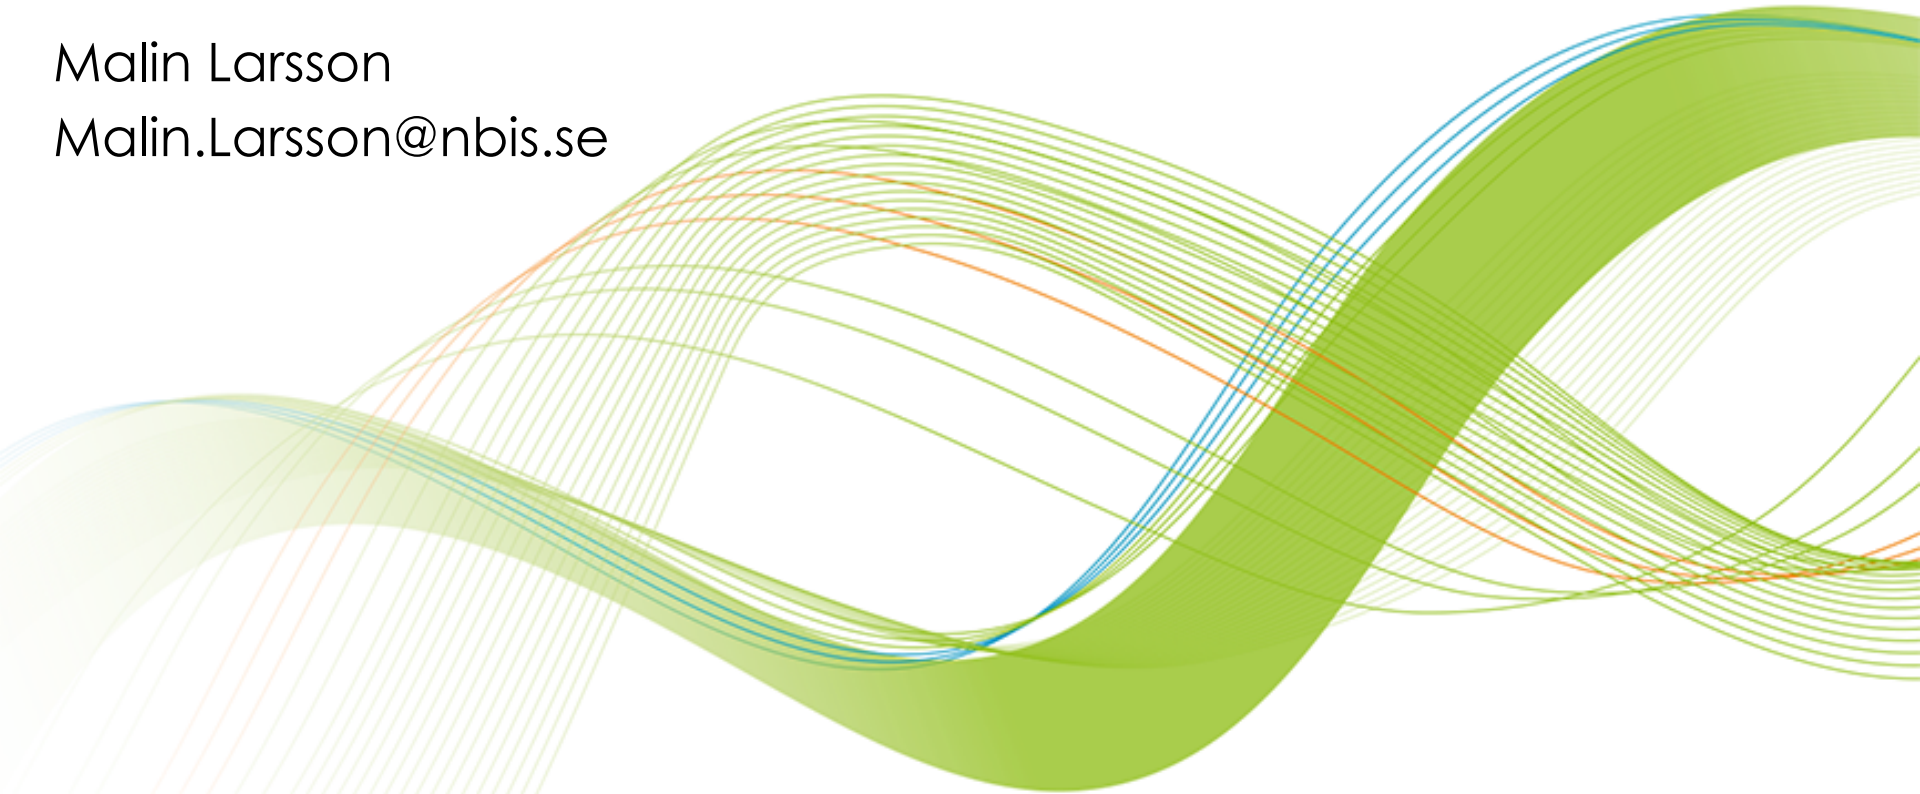
Variant Calling Workflows

Malin Larsson
Malin.Larsson@nbis.se



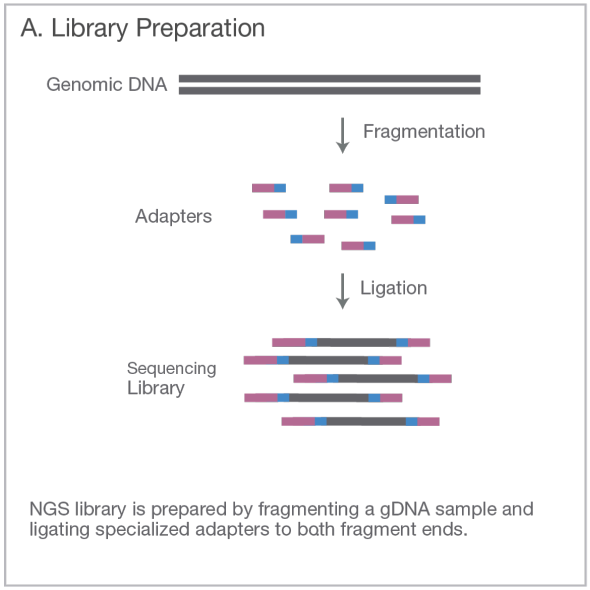
Overview

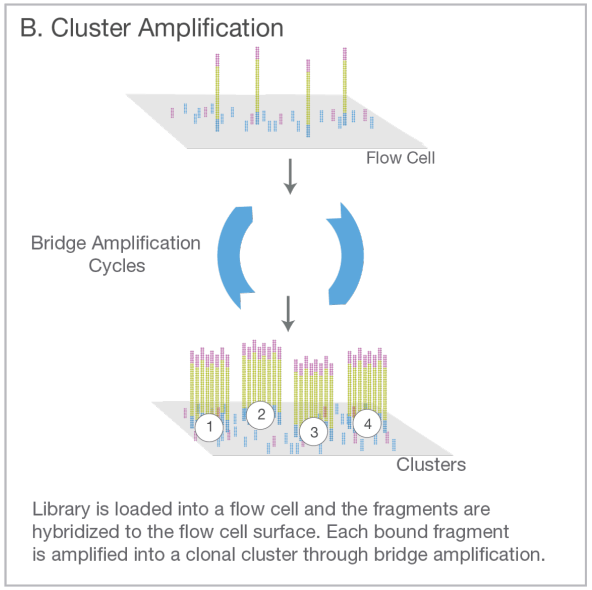
- Workflows
- Basic variant calling in one sample
- Basic variant calling in cohort
- Introduction to exercise

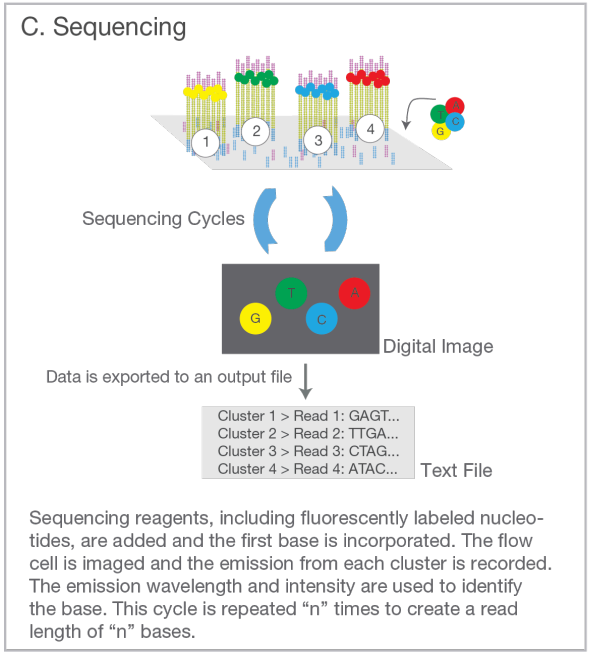
In separate talk Thursday at 9:

- GATK's Best practices

Illumina Sequencing





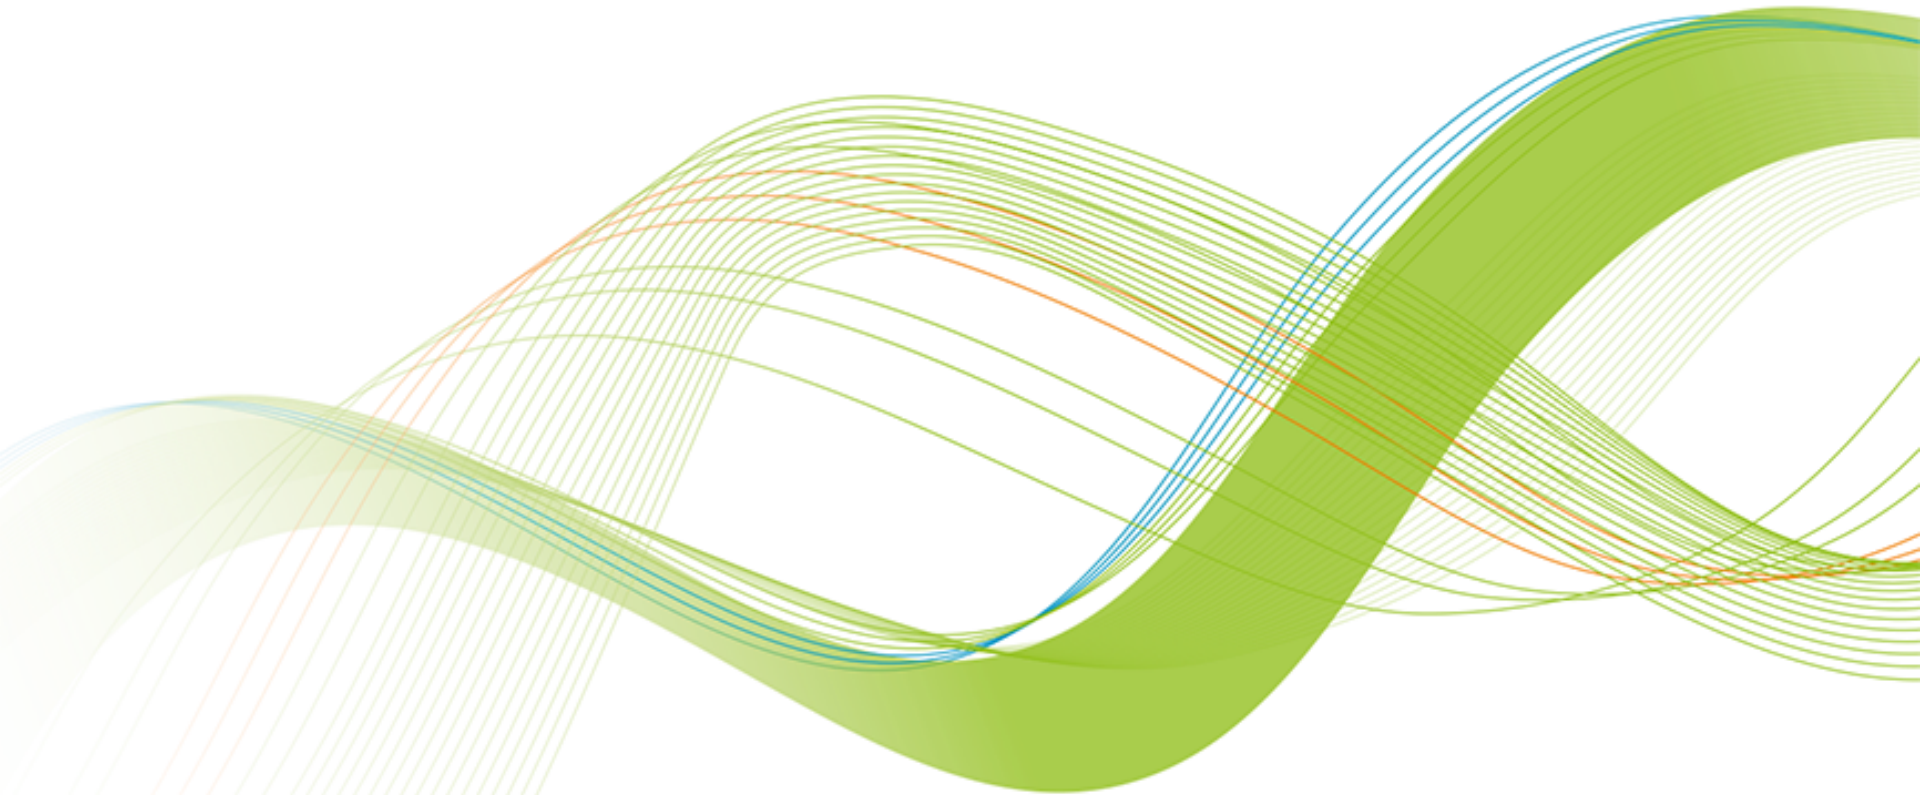


https://www.youtube.com/watch?v=fCd6B5HRaZ8

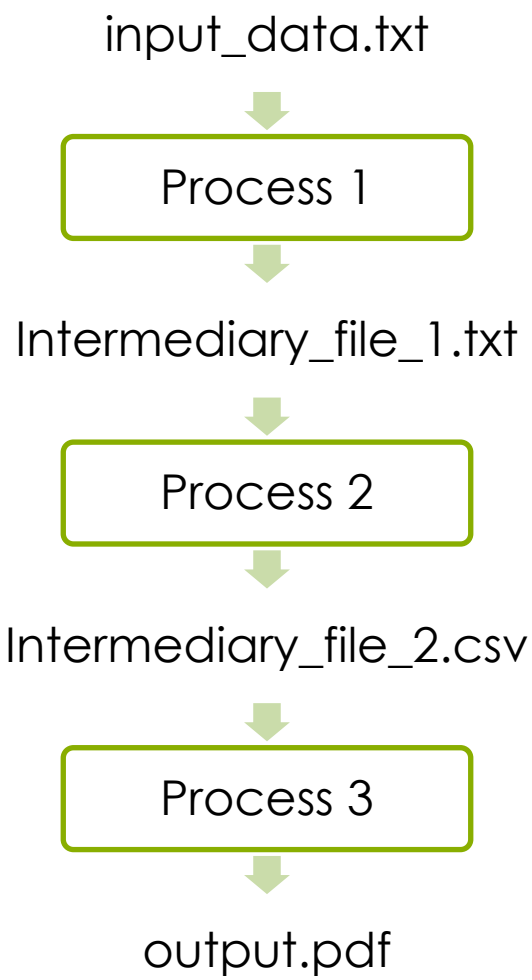
NBIS
NATIONAL BIOINFORMATICS INFRASTRUCTURE SWEDEN

SciLifeLab

Workflows



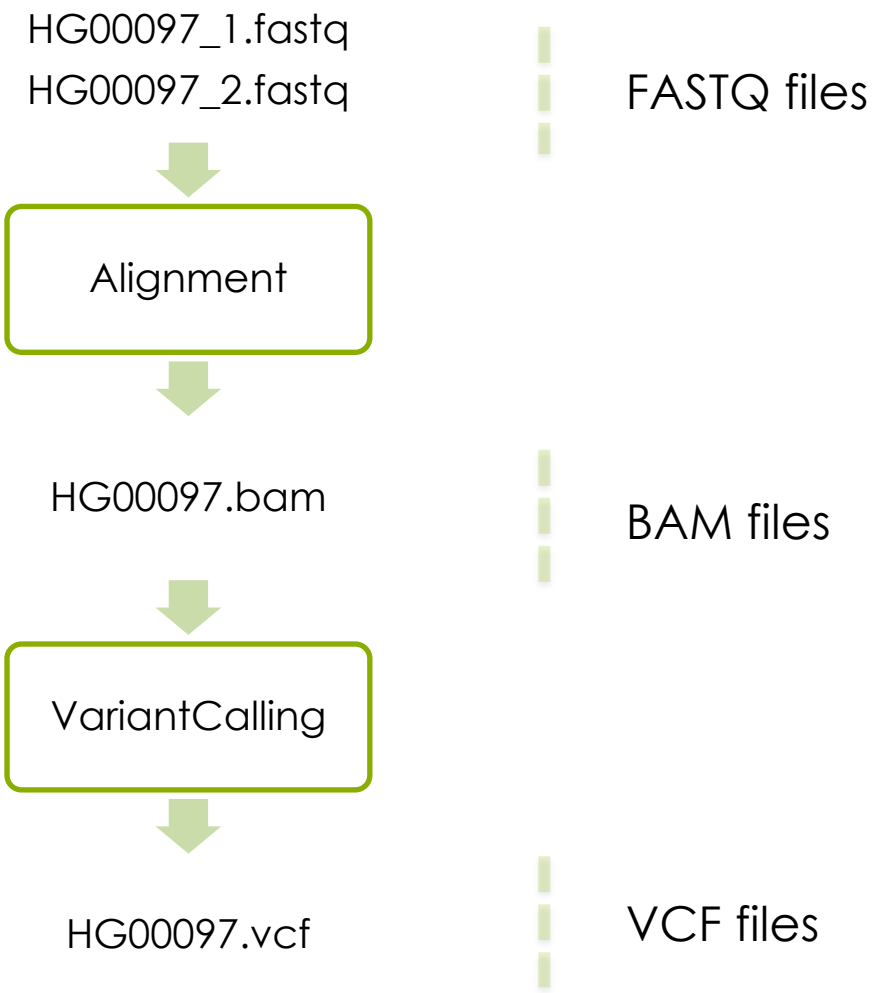
What is a workflow



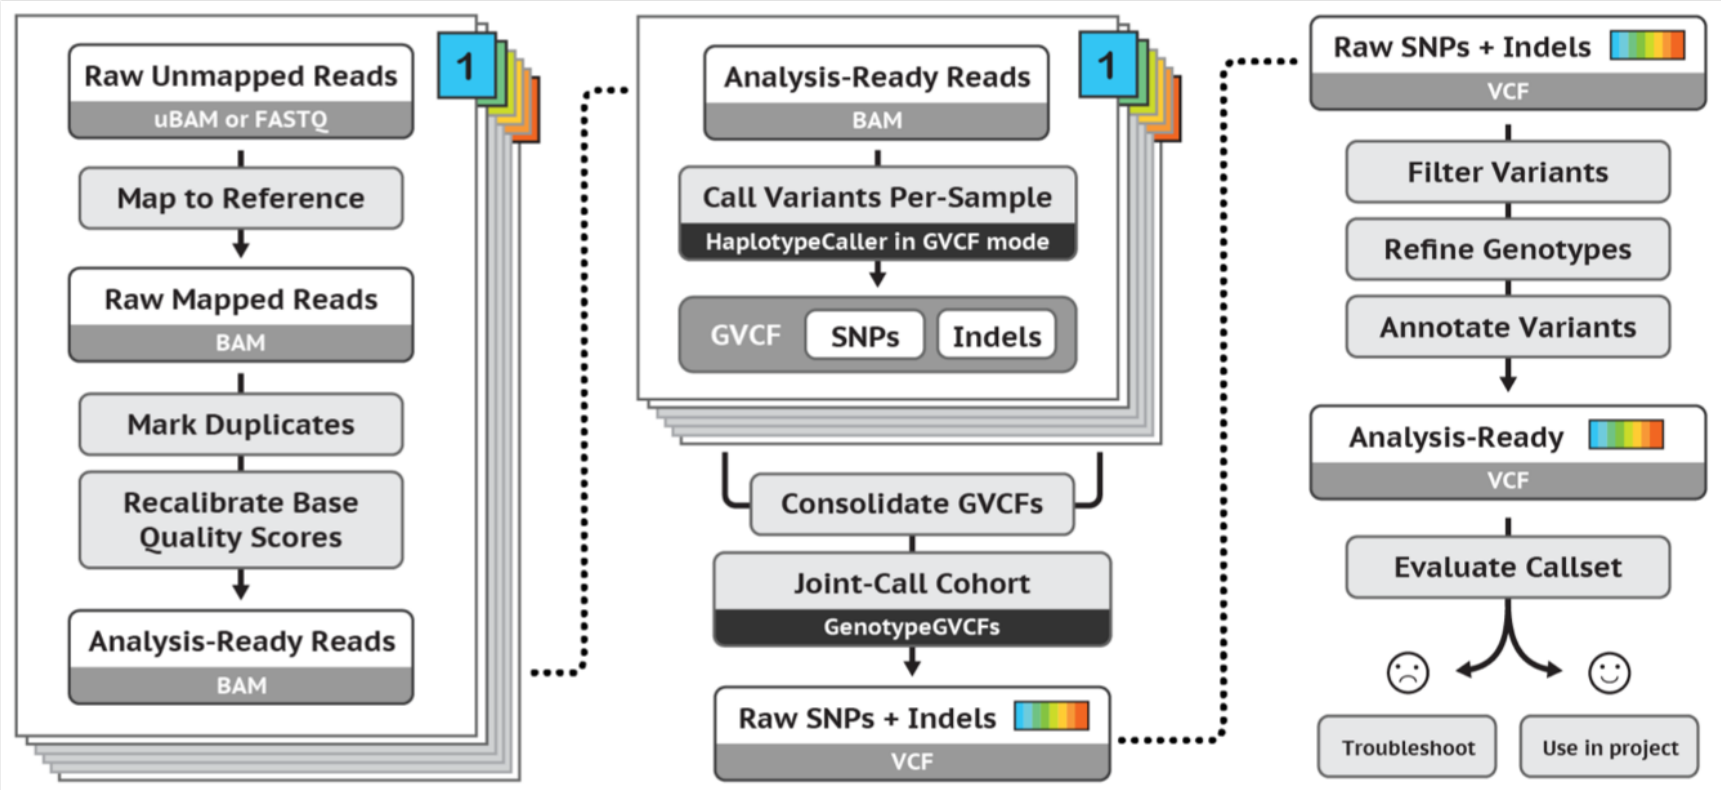
Workflow conventions

- Create a new output file in each process – don't owerwrite the input file
- Use informative file names
- Include information of the process in output file name

Example: Basic variant calling in one sample



GATK's best practices workflow for germline short variant discovery



https://software.broadinstitute.org/gatk/best-practices/

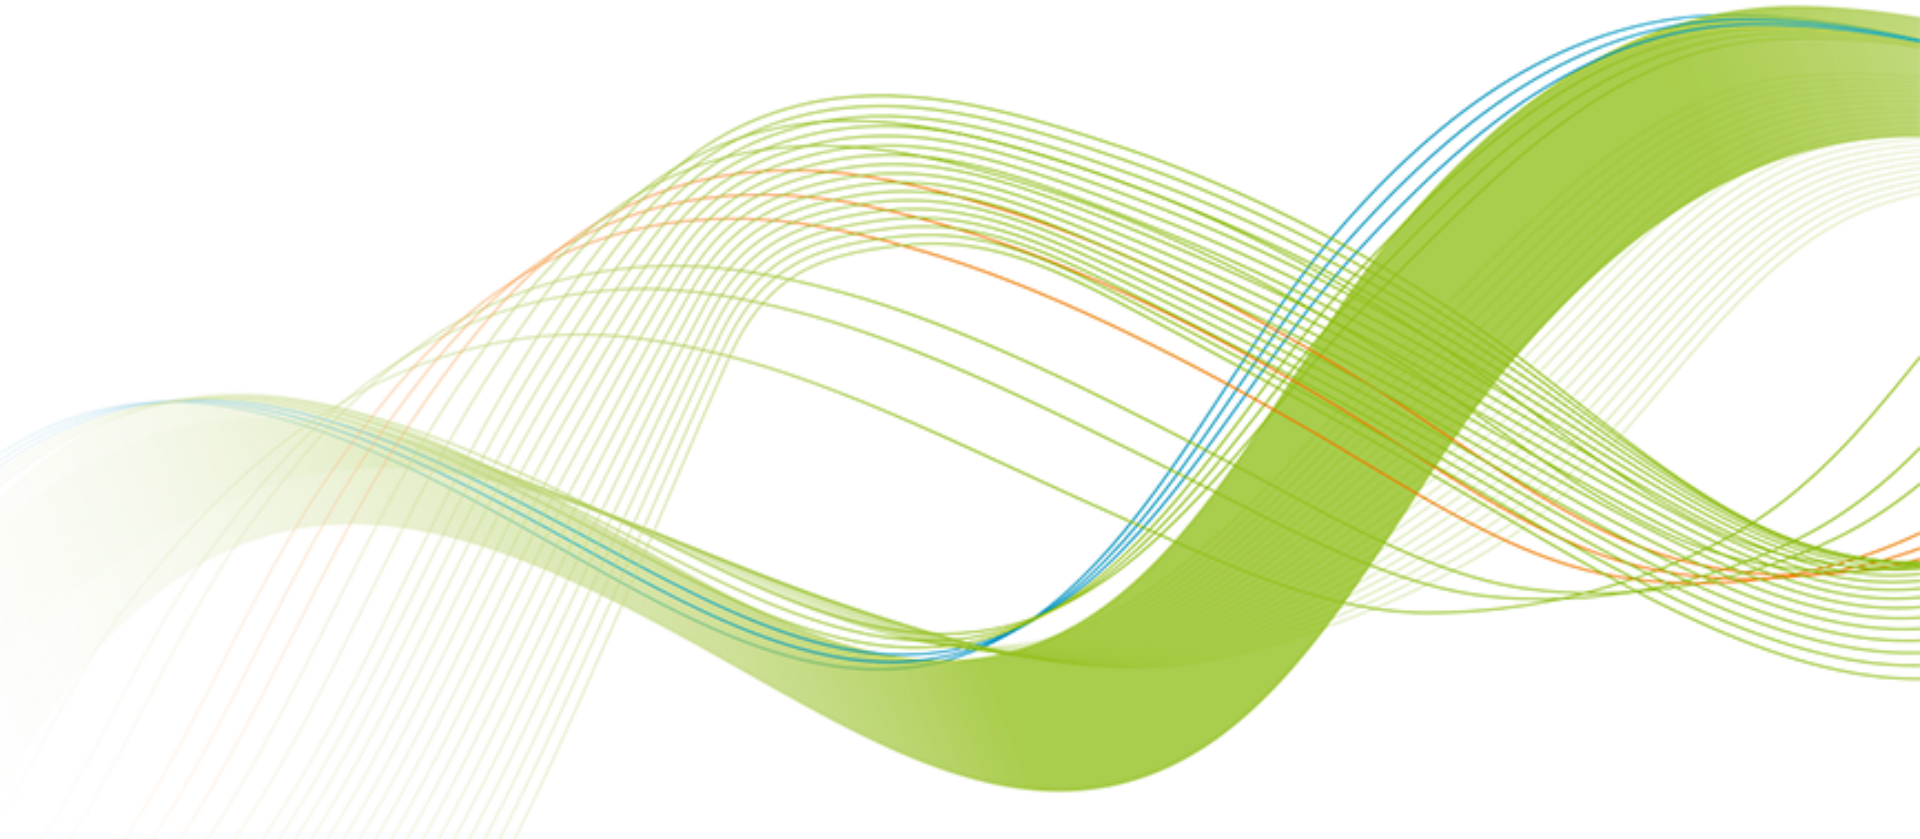
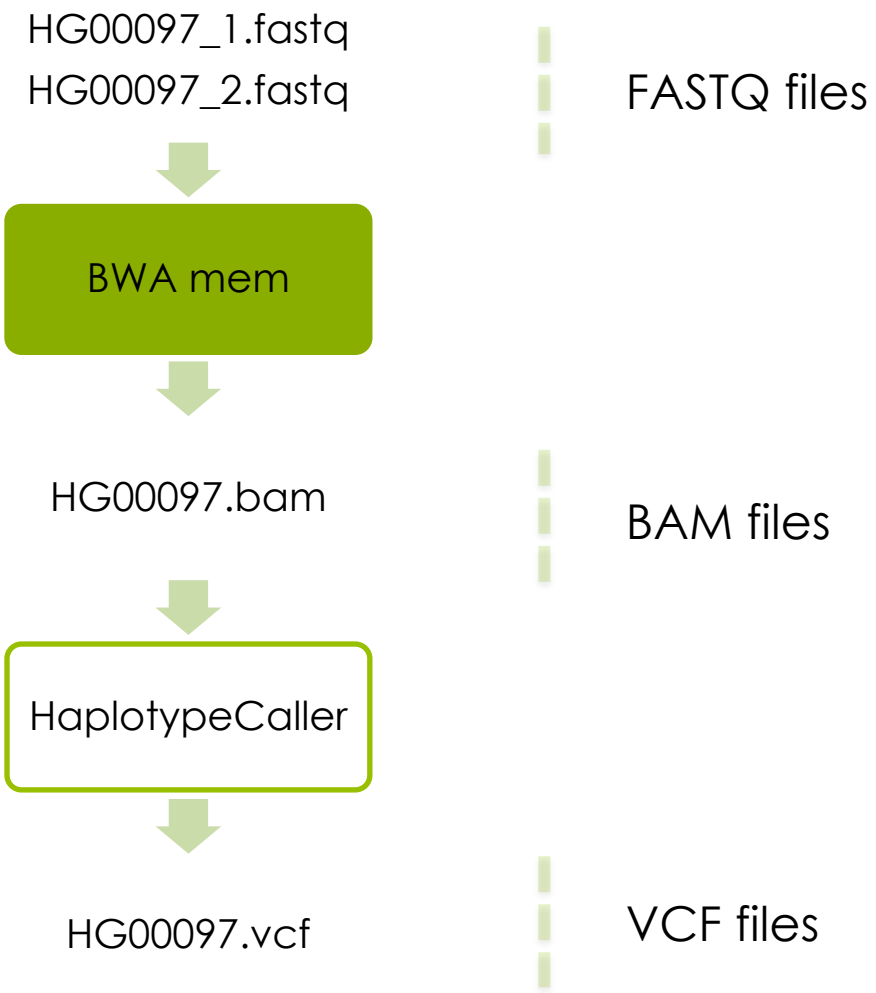
Basic Variant Calling in one sample



Alignment



HG00097_1.fastq
HG00097_2.fastq
FASTQ files
BWA mem
HG00097.bam
BAM files
HaplotypeCaller
HG00097.vcf
VCF files

The reference genome

A reference genome is a haploid nucleic acid sequence which represents a species genome.

The first draft of the human genome contained 150,000 gaps.

HG19: 250 gaps

HG38 is the latest version of the human reference genome, but we will work with HG19.

Keep track of the Reference version

The reference genome sequence is used as input in many bioinformatics applications for NGS data:

- mapping
- variant calling
- annotation

You must keep track of which version of the reference genome your data was mapped to.

The same version must be used in all downstream analyses.

File Indices

- Most large files we work with, such as the reference genome, need an index
- Allows efficient random access
- Different indices for different file-types
- Bwa index = Burrows-Wheeler transform of reference genome (several files)
- Needs index: fasta, bam vcf files

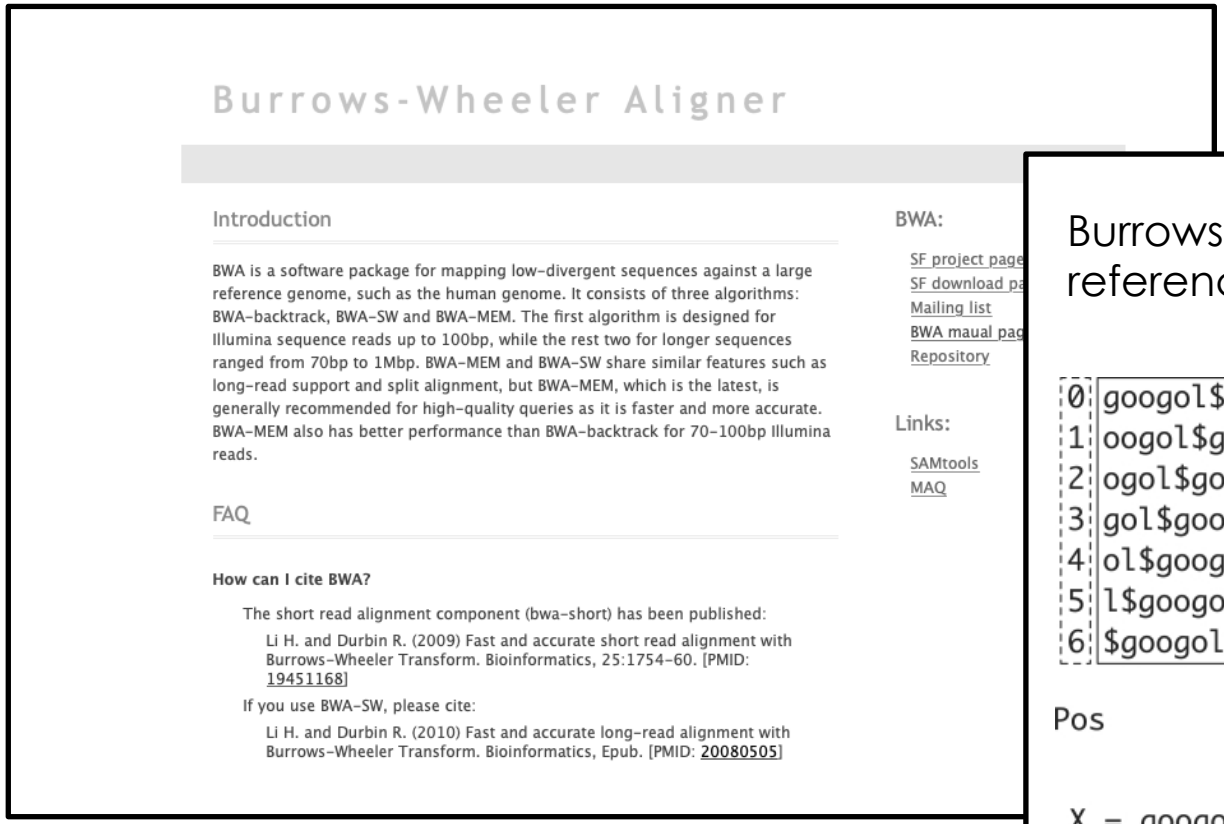
Alignment

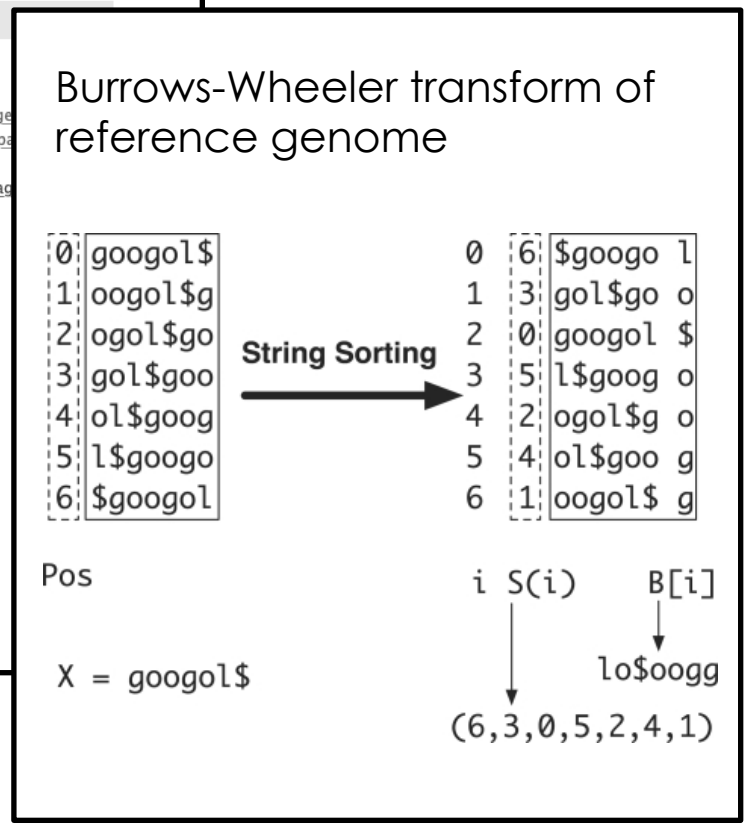
```
module load bwa
```

```
AACAGGTATATCTTCCCCGCTAGCTAGCTAGCTAGCTAGCTAGCTAGCTAGCTACCCTCTTCCTTAGGGACT
                                                GCTAGCTAGCTAGCTACCCT
```

Burrows-Wheeler Aligner

http://bio-bwa.sourceforge.net





Alignment

```
module load bwa
```

Output from mapping - Sam format

HEADER SECTION

```

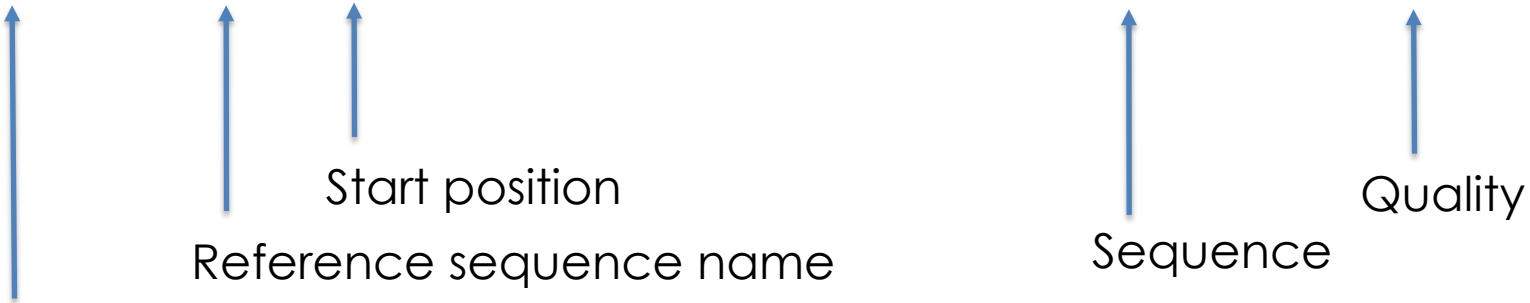
```

ALIGNMENT SECTION

```
Read_001    99    2    3843448    0    101M    =    3843625    278    TTTGGTTCCATATGAACTTT    0F<BFB<FFFBFBFFFBFBB
Read_001    147   2    3843625    0    101M    =    3843448    -278   TTATTTCATTGAGCAGTGGT    FBBI7IIFIB<BBBB<BBFF
Read_002    163   2    4210055    0    101M    =    4210377    423    TGGTACCAAAACAGAGATAT    0IIFBFFFIIIFFIFFFBBF
Read_003    99    2    4210066    0    101M    =    4210317    352    CAGAGATATAGATCAATGGA    0IIFFFIFFFIFIFIIIIIF
```



Convert to Bam

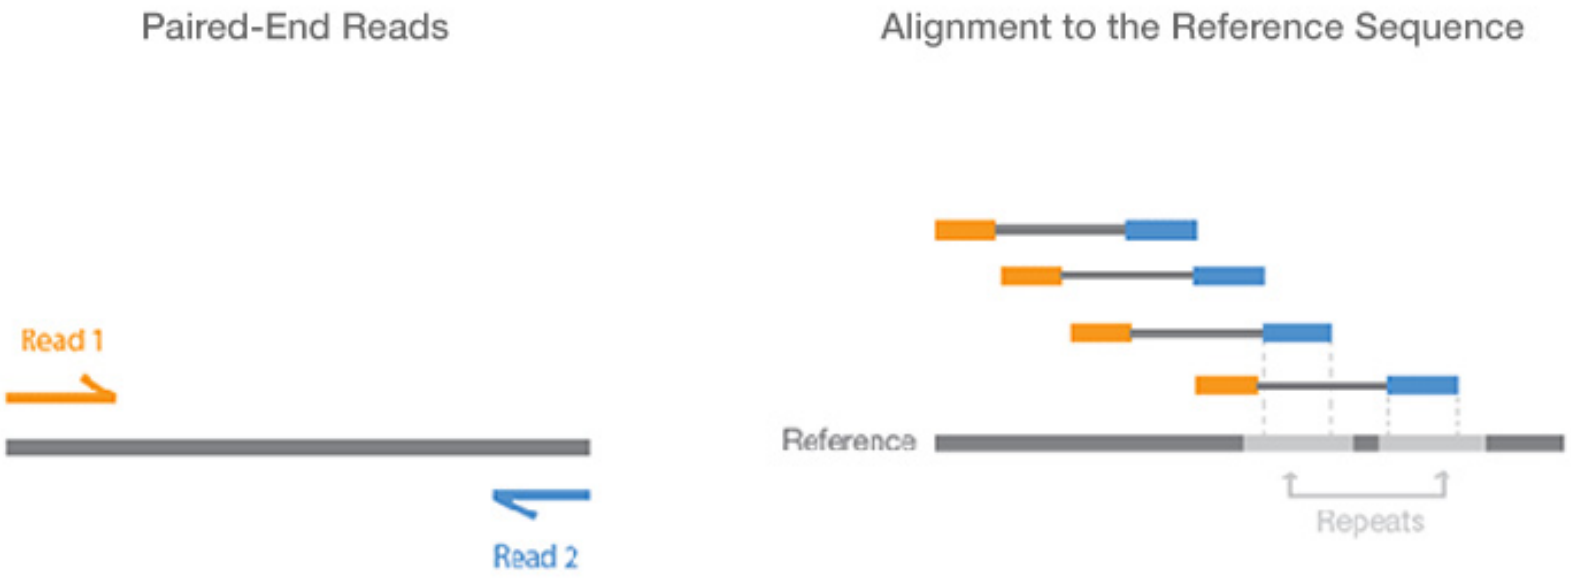
Bam file is a binary representation of the Sam file

Read groups

- Link *sample id*, *library prep*, *flowcell* and *sequencing run* to the reads.
- Good for error tracking!
- Often needed for variant calling
- Detailed description in tutorial or https://gatkforums.broadinstitute.org/gatk/discussion/6472/read-groups

RGID = *combination of the sample id and run id*
RGLB = Library prep
RGPL = Platform (for us ILLUMINA)
RGPU = Run identifier *usually barcode of flowcell*
RGSM = Sample name

Paired-End data



Paired-end sequencing enables both ends of the DNA fragment to be sequenced. Because the distance between each paired read is known, alignment algorithms can use this information to map the reads over repetitive regions more precisely. This results in much better alignment of the reads, especially across difficult-to-sequence, repetitive regions of the genome.

Paired-end data

ID_R1_001.fastq

Reference- and Alternatve Alleles

GGCTTTTCCAACAGGTATATCTTCCCCGCTAGCTAGCTAGCTACTTCAAAT

Reference allele AGCTAGCTA

Alternative allele AGCTGGCTA

Reference allele = the allele in the refence genome
Alternative allele = the allele NOT in the refence genome

Variant Calling
HaplotypeCaller

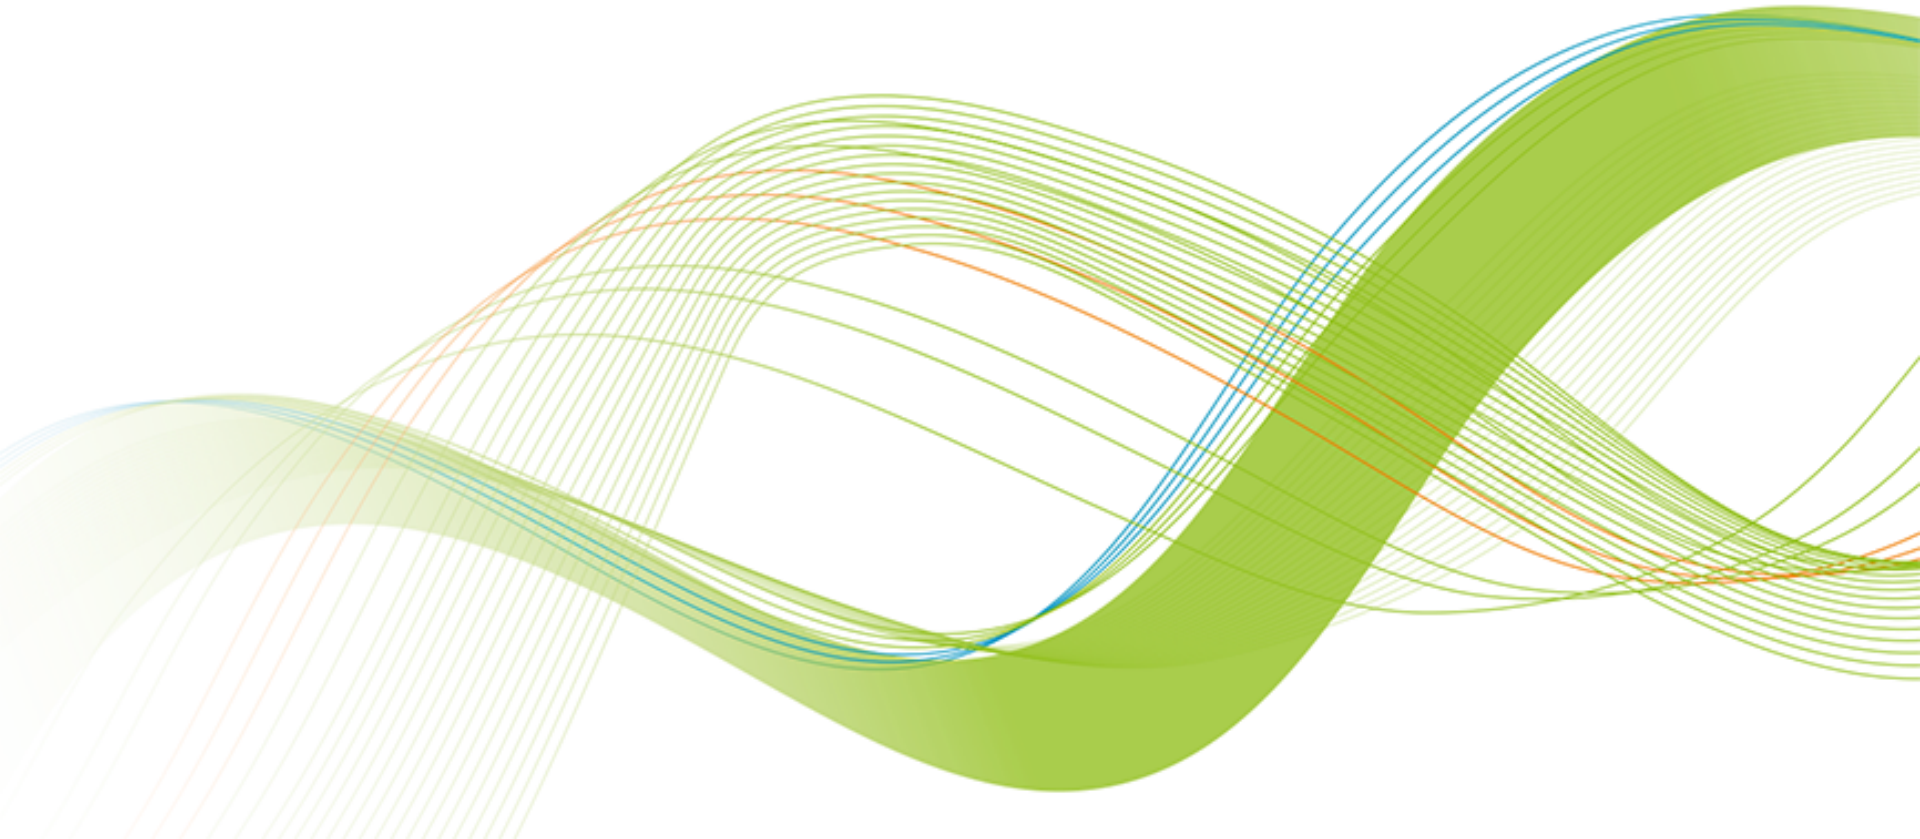
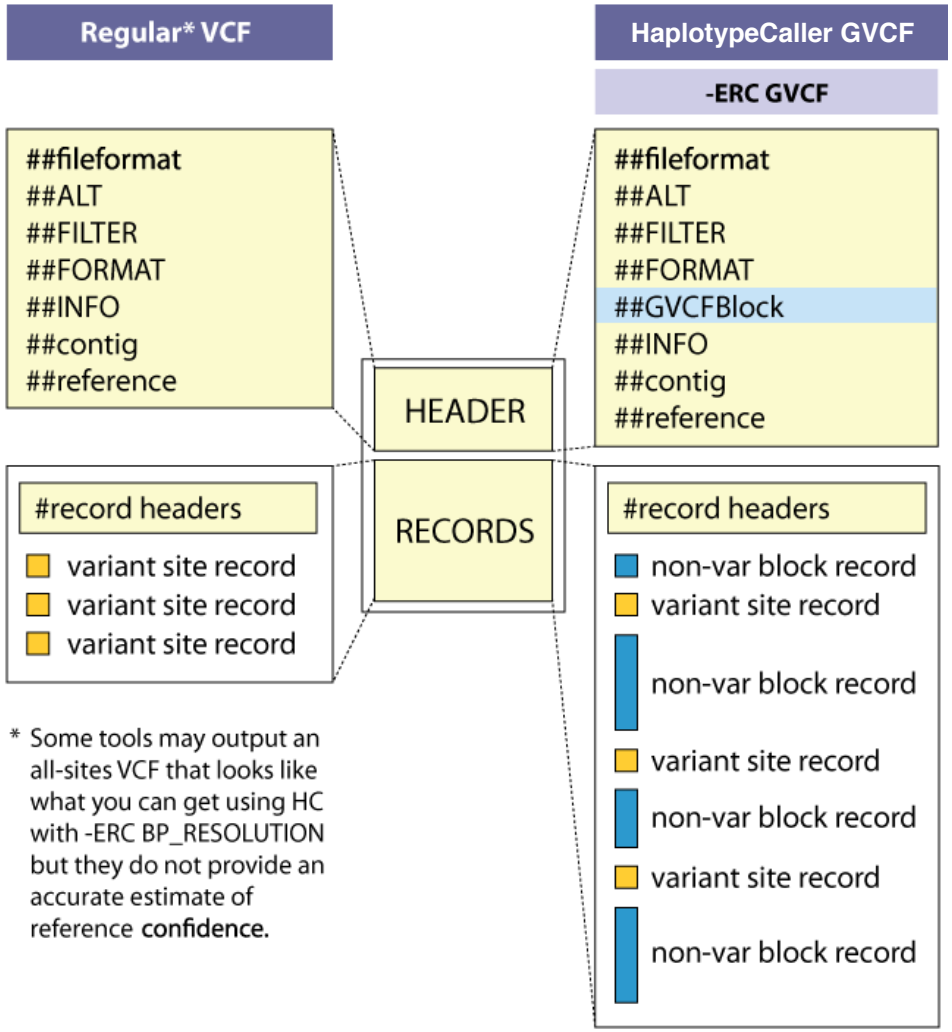
Variant calling in cohort



GVCF Files are valid VCFs with extra information



- GVCF has records for all sites, whether there is a variant call there or not.
- The records include an accurate estimation of how confident we are in the determination that the sites are homozygous-reference or not.
- Adjacent non-variant sites merged into blocks

Basic variant calling in cohort

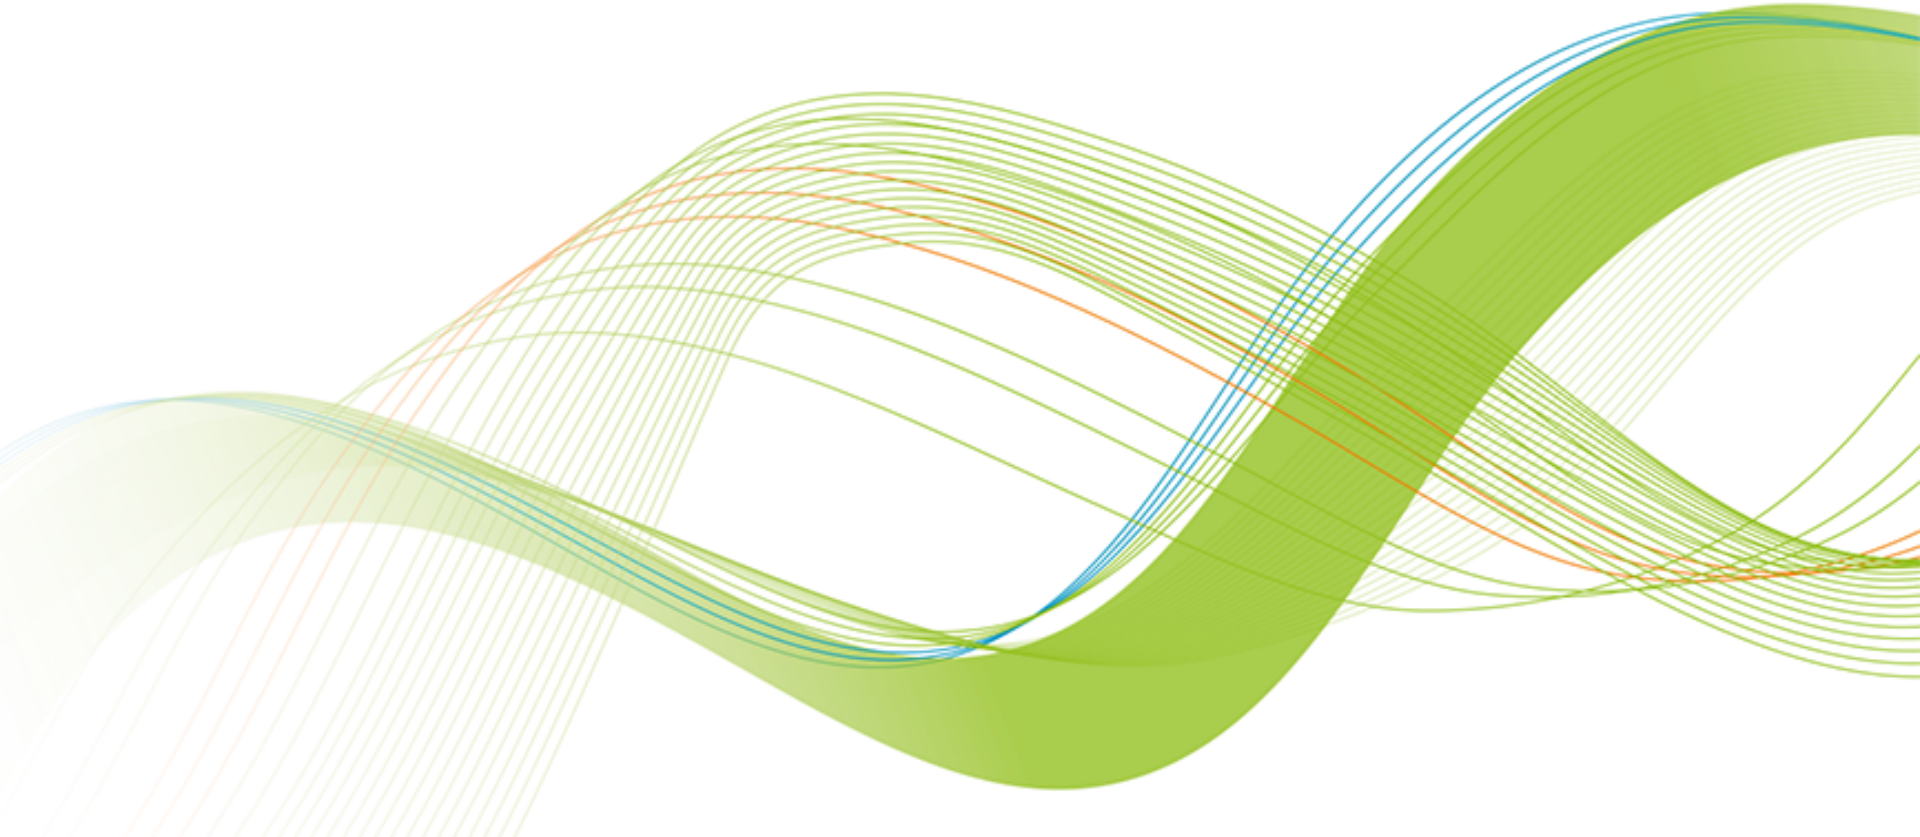
SciLifeLab

Today's lab



1000 Genomes data

- Low coverage WGS data
- 3 samples
- Small region on chromosome 2

About the samples:
https://www.internationalgenome.org/data-portal/sample

The Lactase enzyme

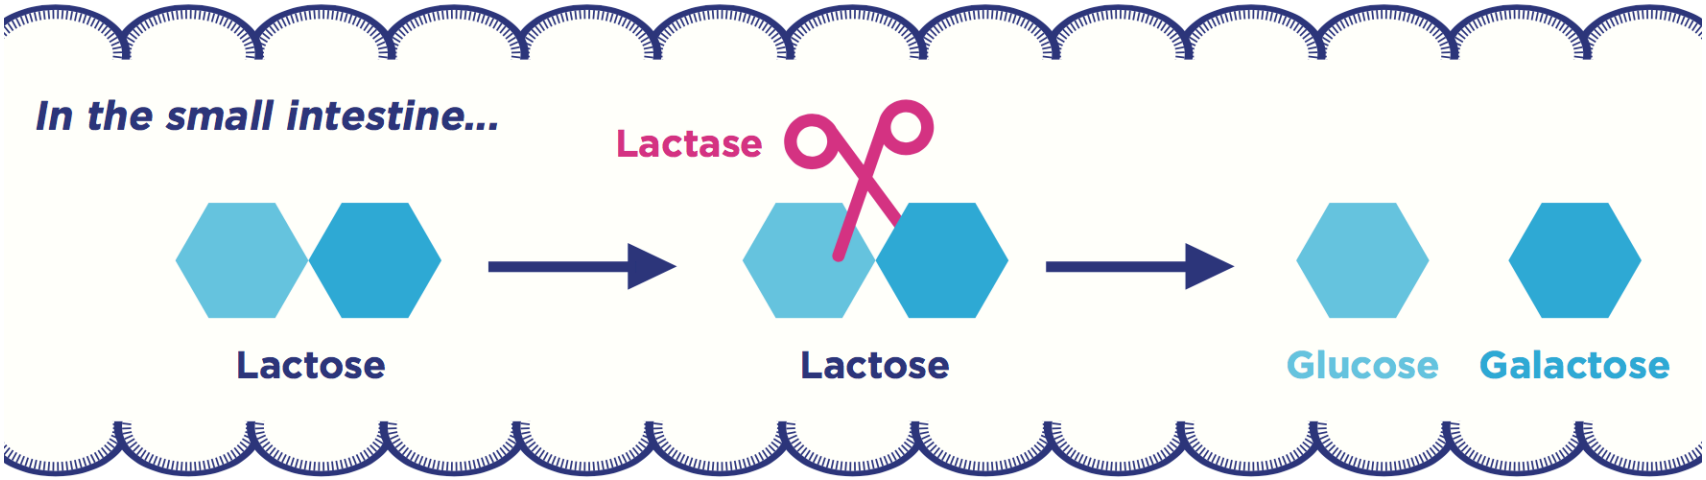


Figure 2. Lactose digestion in the intestine.

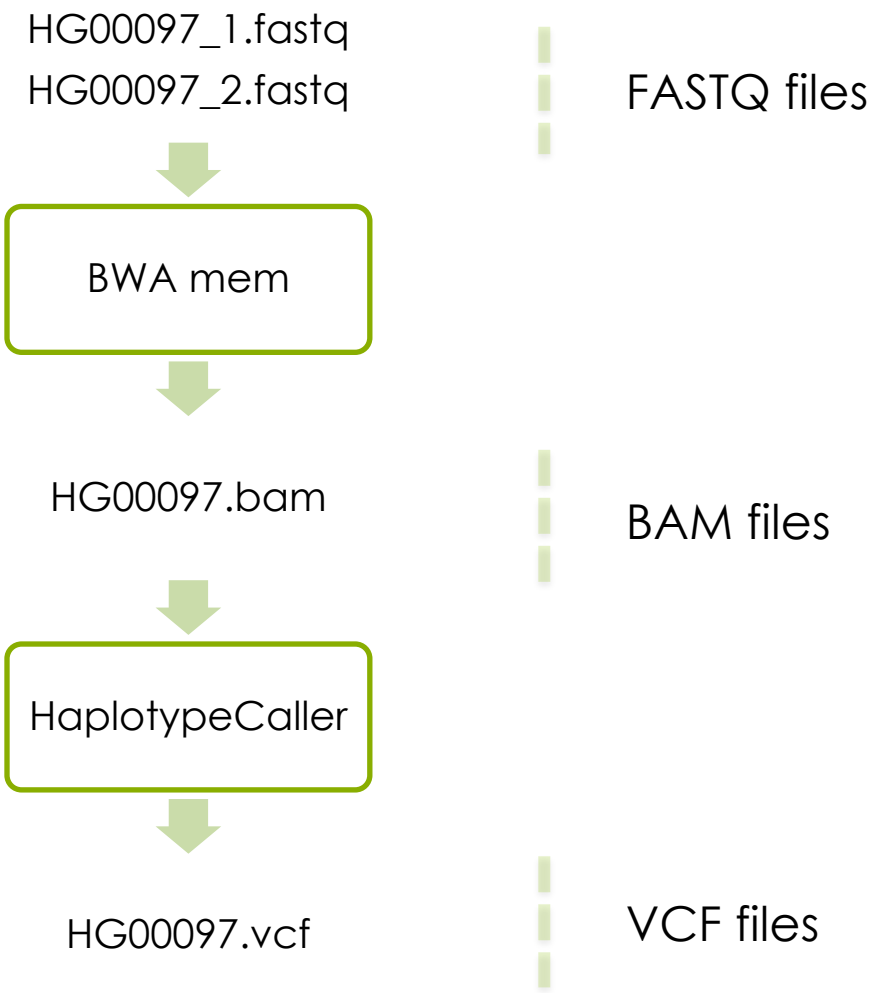
- All mammals produce lactase as infants
- Some human produce lactase in adulthood
- Genetic variation upstream of the *LCT* gene cause the lactase persistent phenotype (lactose tolerance)

part one:

variant calling in one sample

Basic variant calling in one sample



Part two (if you have time):

variant calling in cohort

Joint variant calling workflow

Part three (if you have time):

Follow GATK best practices for short variant discovery

GATK's best practises

Genome Analysis Toolkit

Variant Discovery in High-Throughput Sequencing Data

Developed in the Data Sciences Platform at the Broad Institute, the toolkit offers a wide variety of tools with a primary focus on variant discovery and genotyping. Its powerful processing engine and high-performance computing features make it capable of taking on projects of any size. Learn more
